

The Best In Compact Fluorescents

A compact fluorescent lamp (CFL) is a type of fluorescent light which is designed to replace an incandescent light bulb and fits into almost all existing fixtures. Compared to incandescent lamps giving the same amount of visible light, Surelite CFLs use less power and have a longer rated life. A Surelite CFL can save your company over \$40 in electricity costs over each lamp's life time, and also help the environment by reducing greenhouse gas emissions. Surelite CFLs create a cool refreshing atmosphere or simulate natural daylight in a stylish spiral shape. They are ideal for table lamps, wall scones and perfect for frequently used or hard-to-reach locations. Commercially rated, Surelite CFLs provide longer life and superior light quality over competitive brands. First Nation Distributors has the largest selection and offers the most advanced CFLs on the market today. Surelite's quality, dependability, colour choices are second to none.
