

Warm, glowing, subtle illumination

Vision 30™ is basically a T8 or T12 replacement for the classic warm white lamp with a higher colour rendering index and longer life. Now more of a specialty lamp used to tone down lighting in areas where bright light is not required. The 3000 Kelvin lamps are historically used in restaurants, boutiques, libraries, offices and wherever incandescents are still in use. This lamp gives an off orangey, subtle illumination, which is used to relax environments. A perfect light source for receptionists or computer operators that complain of headaches due to glare. The Vision 30™ is a cozy relaxing light source and when used properly is exceptional!

Benefits

- Matches well with incandescent lamps
- Creates a non-threatening environment
- Very “warm” for low light level areas
- Tones down or relaxes work areas
- Less mercury than industry standard
- Long Life over 40,000 hours

Applications

- The T5 or T8 “warm white” lamp
- For areas with subtle lighting
- Smaller executive offices
- Reception areas
- Furniture stores
- Beauty salons to enhance skin tones
